

## **IN THE CLAIMS**

*This listing of claims will replace all prior versions and listings of claims in the application.*

### **Listing of Claims:**

1. (Original) A shield cable comprising one or more insulated wires that are covered with a shield conductor and a sheath,  
each of said one or more insulated wires comprising a signal conductor covered with an insulator,  
said shield conductor consisting of a plurality of shield layers,  
wherein a first shield layer constituting the innermost layer of said plurality of shield layers consists of a plurality of conductors spirally wound at a pitch of 7 to 13 mm.
2. (Original) A shield cable according to claim 1, wherein  
said one or more insulated wires are two insulated wires whose diameters are not more than 0.3 mm, and  
said sheath and said plurality of shield layers integrally cover said insulated wires.
3. (Currently Amended) A shield cable according to claim 1 [[or 2]], wherein  
a second shield layer is formed by spirally winding a plurality of conductors on said first shield layer in a counter winding direction relative to that of said first shield layer.
4. (Currently Amended) A shield cable according to claim 1 [[or 2]], wherein  
a second shield layer is formed by winding a plurality of conductors on said first shield layer spirally in the same winding direction as that of said first shield layer.
5. (Currently Amended) A shield cable according to Claim 3 [[or 4]], wherein  
a scroll pitch of said second shield layer is not more than a scroll pitch of said first shield layer.

6. (Currently Amended) A wiring component in which a plurality of shield cables according to ~~any one of claims 1 to 5~~ claim 1 are bundled and a connecting terminal portion is provided at least at one end of said wiring component.

7. (Currently Amended) An information apparatus having a shield cable according to ~~any one of claims 1 to 5~~ claim 1, said shield cable being used for a signal wiring to pass through a hinged portion of said information apparatus.

8. (Original) An information apparatus having a wiring component according to claim 6, said wiring component being used for a signal wiring to pass through a hinged portion of said information apparatus.
